WorkTrace local audit: observed outcomes, context conflicts and reuse overhead

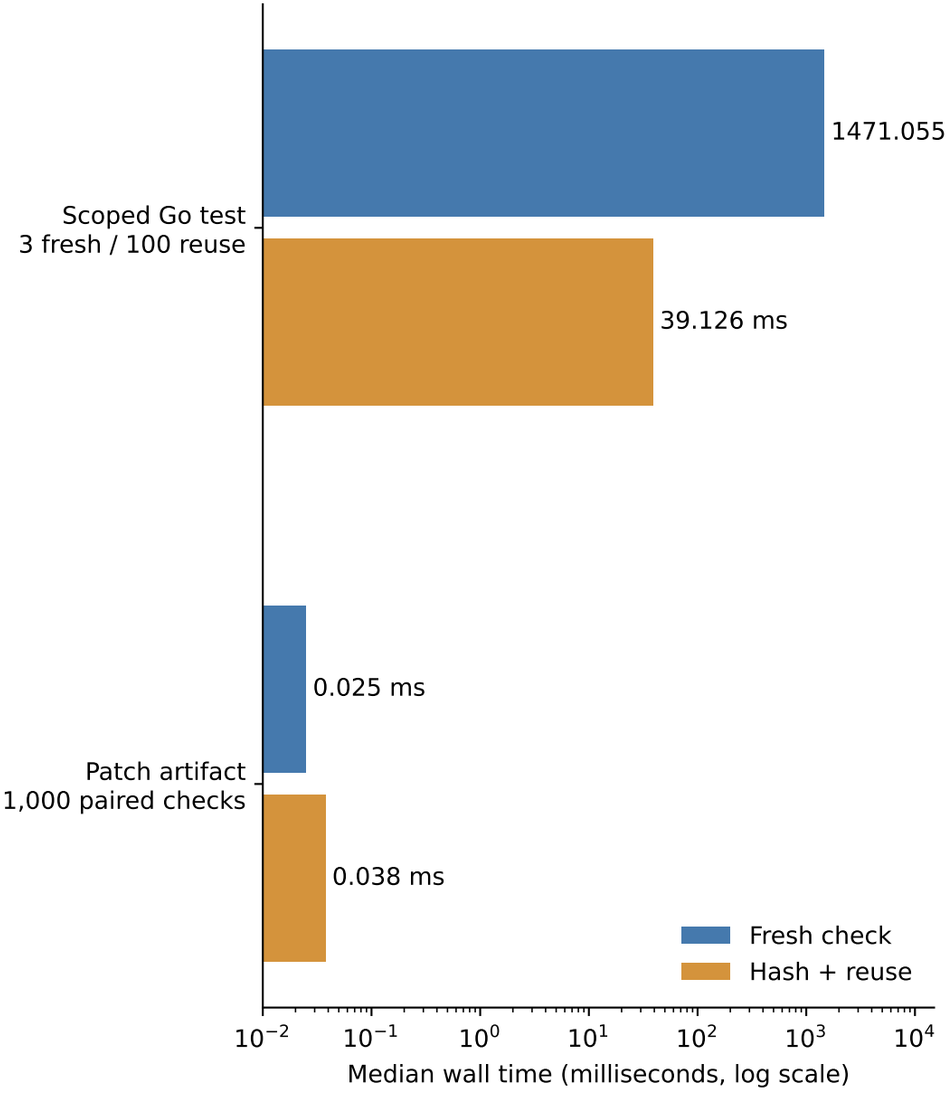
A. Task 03: first scoped pass precedes formatting

	Base	Before formatter	Submitted	Reference
Patched targeted test	FAIL	PASS	PASS	PASS

B. Task 04: test and written-requirement contexts disagree

	Base	Before formatter	Submitted	Reference
Patched selected tests	BUILD FAIL	FAIL	FAIL	PASS
Explicit pool values	FAIL	PASS	PASS	PASS
Explicit false flag	FAIL	PASS	PASS	PASS
Absent flag = false	FAIL	PASS	PASS	FAIL
Default fixture preserved	PASS	PASS	PASS	PASS
Deprecated fixture preserved	PASS	PASS	PASS	PASS

C. Reuse overhead changes the benefit



What these checks establish

- Behavior, formatting, requirement coverage and evidence reuse need separate fields.
- Task 04’s reference fails the authored absent-flag diagnostic; do not collapse both contexts into one reward.
- Reuse time includes hashing and lookup. Go build caching remains enabled; test-result caching is bypassed with -count=1.
- Two reconstructed Luna cases; scoped local checks only. No original benchmark certification or LLM savings measured.
